

# How to solve the gap between the different height requirements per Code when a staircase meets a landing.

## Residential Code Height Requirements

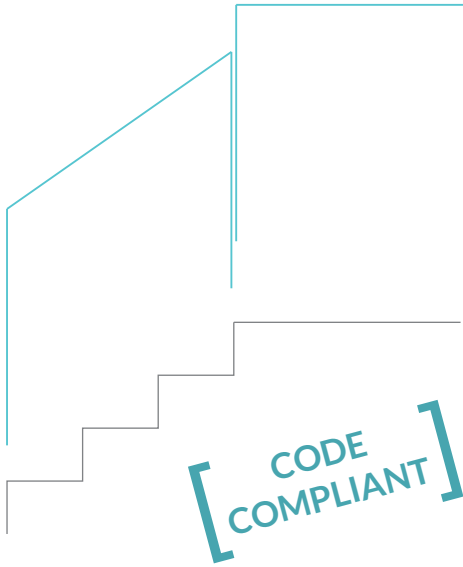

Here's what they ask you to do.

And here's the issue.

1. Respect the Code  
(standard)

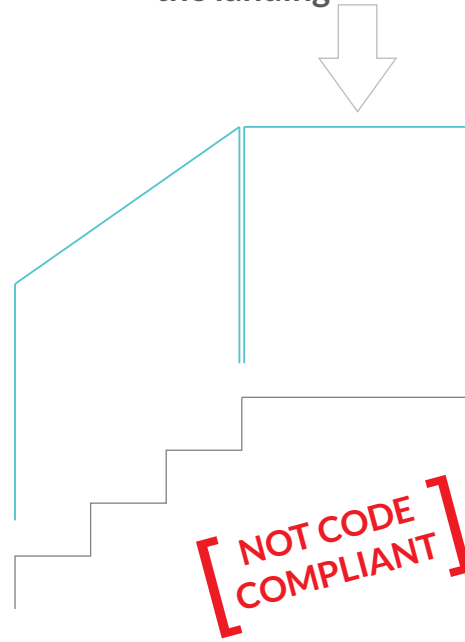

2. Higher panels on the stairs

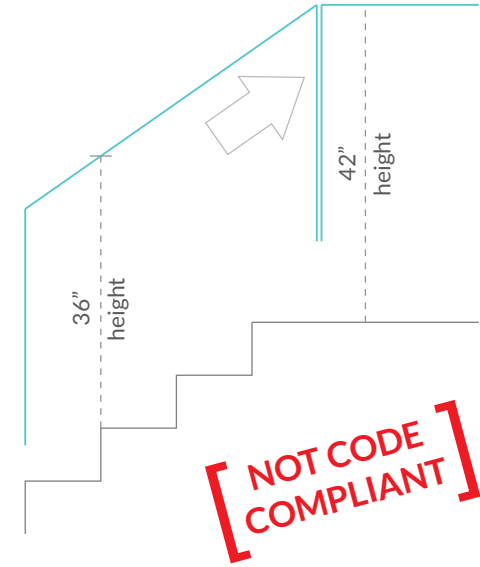

*Handrail on the stairs too high.*

3. Lower panels on the landing

*Landing too low.*

4. Continuing with the angled panel on the landing until reaching the proper height.

*Landing not high enough on that gap.*

**ALTERNATIVE:**  
Handrails attached on the side of the glass
